

Eat Fish to Lose Weight: Healthy and Delicious Fish Recipes For You and Your Family

JAM PACKED WITH DELICIOUS FISH RECIPES THAT YOUR WHOLE FAMILY WILL LOVE! There are a variety of delicious reasons to make fish and shellfish, a regular part of your diet. Fish is an excellent source of high quality protein, beneficial oils and many important vitamins and minerals. Fish is a low-fat high quality protein that is low in fat and low in cholesterol. Research studies have reported that those who eat fish lose more weight than people who exercise, but don't eat fish. In addition, the Omega-3 fatty acids found in fish increase metabolism by increasing the hormones that regulate digestion and insulin production. High amounts of insulin increase the amount of fat that is stored in the body instead of using this fat for energy. When study participants regularly consumed fish with adequate levels of Omega-3, insulin levels dropped 50 percent lower and their fat was used for energy instead of being stored. Some evidence shows that eating fish improves weight loss and decreases blood sugar in overweight people and people with high blood pressure. Medline Plus a service of the National Institutes of Health recommends for weight loss a daily serving of 2-7 ounces of fish containing approximately 3.65 grams omega-3 fatty acids (0.66 gram from EPA and 0.60 gram from DHA).
