

executive function, attention, memory, language, visual perception, somatosensory olfactory function, mood/personality, and response bias. A unique feature is the inclusion of tables that summarize salient features of tests within each domain so that readers can easily compare measures. Additional tables within each test review summarize important features of each test, highlight aspects of each normative dataset, and provide an overview of psychometric properties. Of interest to neuropsychologists, neurologists, psychiatrists, and educational and clinical psychologists working with adults as well as pediatric populations, this volume will aid practitioners in selecting appropriate testing measures for their patients, and will provide them with the knowledge needed to make empirically supported interpretations of test results.
