

Accounting: Information for Decisions

This text, written by an experienced author team, is designed to help one understand how to use both managerial and financial accounting information to make decisions. Class-tested for three years across the United States, its friendly approach has already earned it rave reviews. The text provides an introduction to business in Chapter 1 and is the only introductory accounting book to have an entire chapter (Chapter 2) devoted to creative and critical thinking. A non-technical approach makes learning accounting accessible for majors and non-majors, focuses on using accounting information for decision making, and conforms with AECC guidelines for teaching accounting. A full-chapter length appendix on the accounting cycle (debits/credits) allows instructors to implement this portion of the course anywhere they desire.
