

## MCSE Training Kit (Exam 70-221): Designing a Microsoft Windows 2000 Network Infrastructure (MCSE Training Kits)

This official MCSE Training Kit teaches IT professionals how to design a network infrastructure in Windows 2000 -- as they prepare for MCP Exam 70-221, a core elective on the new Windows 2000 MCSE track. The kit balances conceptual information with practical application: students learn through an integrated system of skill-building tutorials, case study examples, and self-assessment tools. Topics map directly to the objectives measured by the MCSE exam, including analyzing business requirements; evaluating technical requirements; designing a network infrastructure in Windows 2000; planning for Internet connectivity; designing a wide area network infrastructure; and creating a strategy for implementing, monitoring, and managing network services. Business scenario examples help students apply the concepts they learn to real-world work situations. An economical alternative to classroom instruction, this MCSE Training Kit enables students to set their own pace and learn by doing!
