

The Alimentary Canal

The focus of this book on the alimentary canal is to provide resources and ideas to help students and non-students of all kinds in their academic quest. Furthermore, the goal of this book is to appeal to a wide variety of students whose desire is to study and take various exams in Biology. Therefore, as a certified or trained teacher, I found it necessary and appropriate to prepare educational material like this book to benefit the population in general, and in particular students in grade 6 through grade 12 in the new Gambian Educational System and other various exams in Biology around the world. TC and HTC students in The Gambia will find this book useful during the course of their studies at The Gambia College School of Education and in their teaching careers in schools or in various professions in science generally. Personally, I was studying Mathematics with Physics as a minor for my HTC at The Gambia College School of Education when I came across Biology.
