

What if Einstein was Right?

No fairer destiny could be allotted to any physical theory, than that it should of itself point out the way to the introduction of a more comprehensive theory, in which it lives on as a limiting case Einstein, Relativity, 1916. What if Einstein was Right?! tells the compelling story of Einsteins life-long solitary struggle to find (his) Unified Field Theory against all odds, and against all of his contemporaries better judgment... Guided by his unfailing talent to detect paradoxes and search for a deeper unifying principle underlying apparently distinct phenomena and armed by his iron-will tenacity and meta-physical faith in a rational reality (or a God) Einstein spent the entire second half of his (unparalleled) scientific career pursuing a Unified Field Theory that could unify between quantum mechanics and Relativity theory... Interestingly enough - half a century later everybody is searching for precisely such a Theory of Everything (TOE) but thus far with no success!?

What if Einstein was Right?! traces Einsteins genius quest for such a Unified Field Theory by following his scientific, intellectual, and even metaphysical inquiries which ultimately leads up to the formulation of a new hypothetical Computational Unified Field Theory (CUFT) that is capable of unifying Quantum Mechanics and Relativity Theory based on a novel Universal Computational Principle. The discovery of this new hypothetical CUFT also questions the basic materialistic-reductionistic thesis underlying contemporary science (including a reformalization of key scientific paradigms including: Darwins Natural Selection principle, the Genetic Encoding hypothesis and Godels Incompleteness Theorem). Dr. Jehonathan Bentwich is a Neuroscientist that was trained at Brookhaven National Laboratory (NY, USA) who has developed this new hypothetical Computational Unified Field

Theory (CUFT) (Bentwich, 2011b) over the past twenty years of his academic research. Dr. Bentwich is also the inventor of a new medical device proven to be effective in reversing cognitive decline in Alzheimers disease (Bentwich, 2011a) and the founder of several medical device companies.
