

## Innovations in E-Systems for Business and Commerce

Innovations in E-Systems for Business and Commerce presents some of the latest research and direction in the field of e-business and e-commerce. With up-to-date information for top researchers from around the world, the volume covers a wide selection of topics on innovations in e-business and e-commerce. E-systems are becoming standard practice across all sectors, including healthcare, engineering, business, education, security, and citizen interaction with local and national government. The use of Internet technologies facilitates rapid and easy dissemination of information and data as well as increased convenience and efficiency to assist service providers and end-users. This book is aimed at three groups of people: undergraduate students and postgraduate students conducting research in the areas of e-systems related to e-business or e-commerce; researchers at universities and other institutions working in these fields; and practitioners in the research and development departments of industrial settings. The volume can also be used as an advanced reference for classroom use.
