

Scientific Instruments on Display (History of Science and Medicine Library / Scientific Instrum)

During their active lives, scientific instruments generally inhabit the laboratory, observatory, classroom or the field. But instruments have also lived in a wider set of venues, as objects on display. As such, they acquire new levels of meaning; their cultural functions expand. This book offers selected studies of instruments on display in museums, national fairs, universal exhibitions, patent offices, book frontispieces, theatrical stages, movie sets, and on-line collections. The authors argue that these displays, as they have changed with time, reflect changing social attitudes towards the objects themselves and toward science and its heritage. By bringing display to the center of analysis, the collection offers a new and ambitious framework for the study of scientific instruments and the material culture of science.
