

## The Baltimore Case: A Trial of Politics, Science, and Character

David Baltimore won the Nobel Prize for medicine at the age of 37. A leading researcher and respected public figure, in 1990 he was made president of Rockefeller University. Less than 18 months later, he resigned amid allegations of fraud. Daniel Kevles' investigation of what became known as The Baltimore Case reveals a witch-hunt in which Baltimore and Thereza Imanishi-Kari, former colleagues at the Massachusetts Institute of Technology, were unjustly accused and vilified in the name of scientific integrity and public trust. While never accused of wrongdoing, Baltimore staunchly defended the work and integrity of Imanishi-Kari when her findings came under attack from a post-doctoral fellow, Margot O'Toole, whom Imanishi-Kari had hired to work in her laboratory. Kevles' explanation of why he thought Imanishi-Kari to be innocent appeared in an article in *The New Yorker* in May 1996. In June of that year she was finally exonerated. Kevles also raises broader questions about the way science works and about the complex discord between the public's right to accountability and the scientists' need for autonomy in the laboratory.
