

## The chemical composition (phytochemicals, vitamins and minerals) analysis and the antimicrobial activities of the leaves of *Viscum album* (Mistletoe).

Mistletoe is a hemi-parasitic shrub, which grows on the stems of other trees. It has stems 30-100 centimeters (12-39in) long with dichotomous branching. In this work, the Phytochemicals present in the leaves of mistletoe, the elemental or minerals present in the leaves, the vitamins present in the leaves, the antibacterial activities of mistletoe leaves from the three different host plants. Other medicinal plants and their medicinal values are also discussed in this book, which can help you sustain your individual health cheaply.
