

# The New Consumers: The Influence Of Affluence On The Environment

While overconsumption by the developed worlds roughly one billion inhabitants is an abiding problem, another one billion increasingly affluent new consumers in developing countries will place additional strains on the earth's resources, argue authors Norman Myers and Jennifer Kent in this important new book. *The New Consumers* examines the environmental impacts of this increased consumption, with particular focus on two commodities - cars and meat - that stand to have the most far-reaching effects. It analyzes consumption patterns in a number of different countries, with special emphasis on China and India (whose surging economies, as well as their large populations, are likely to account for exceptional growth in humanity's ecological footprint), and surveys big-picture issues such as the globalization of economies, consumer goods, and lifestyles. Ultimately, according to the authors, the challenge will be for all of humanity to transition to sustainable levels of consumption, for it is unrealistic to expect new consumers not to aspire to be like the old ones. Cogent in its analysis, *The New Consumers* issues a timely warning of a major and developing environmental trend, and suggests valuable strategies for ameliorating its effects.
