

# The Urban Turn: Cities of Knowledge and Talent - Industrial Location and the Economic Geography of Danish City Regions

The book is an overview and analysis of the contemporary location, distribution and dynamics of economic activity, uneven geographies of growth and the local economic development processes. Focus is on the localisation of the knowledge economy and talent, e.g. the part of the labour force which is central to the production, use and distribution of knowledge. The urban turn emphasises the importance of cities and city regions as the key places that generates economic growth in modern capitalism. The resurgence of large cities has happened concurrently with the rise of the knowledge economy and together with the increased use of talent. Thus, this book examines the relationships between the knowledge economy and city regions and how this challenge local and regional development.
